She is very competent.

Hildred is a miracle of life, so much passionate and energetic. Comprehensive talks with such a choice of words(e.e. color coded). well shared eye contact. This is so sad if she gets retired soon!

I really liked the fact the Hildred asked us about what topics we want to discuss. Overall, the lectures and feedback were very helpful.

Comment

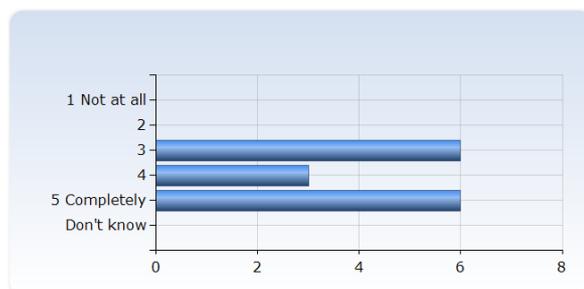

This lecture is completely redundant.

Jan is a great chemist with a large scientific vocabulary. He could have reduced the number of organic mechanism he explained.

Lectures about writing the first draft were not good at all. They were extremely specific and primarily related to Jan-Erling Bäckvall's work. I could not learn anything from his lecture.

She is definitely not the person to explain things precisely and comprehensibly.

She gave us a good view on publishing. Also some lessons for life. Wonderful professor!

4. How did you like the assignment to write a short text describing your research project and to get comments on it first by another PhD student and then by Hildred on your final version?

good idea

5. Please suggest changes for the next time the course will be given. This feedback is important to us.

Please take Jan Bäckvall out of this course. The material he handed out can also be understood without him. This lecture can rather be replaced with an interactive exercise.

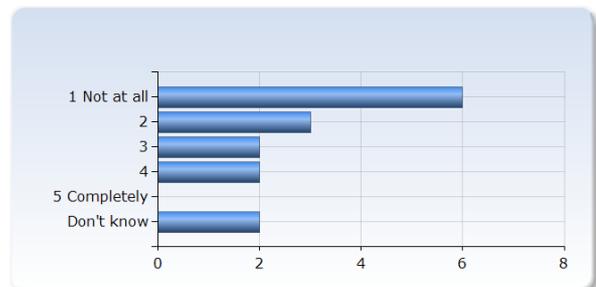

increase the number of sessions with Hildred!

Lectures about writing the first draft should be reworked and perhaps given by another lecturer.

6. Did you have some use of the book "The craft of scientific communication" by J.E. Harmon and A.G. Gross as an inspiration for scientific writing?

I have not looked into this book.

I think it would have been better to emphasize on the book during the lectures since one will forget to follow up with the book.

I have not used the book

Comment

It is not respectful to come late, especially when not having access to the lecture room and knocking on the door then.
Not many came late
